

CONNECTING MANUFACTURING PLANTS THROUGH A SINGLE SOURCE OF ASSET INFORMATION

INDUSTRY

Manufacturing – Oil & Gas

ACCRUENT SOLUTIONS

Meridian – Engineering Document Management

INTEGRATIONS

SAP PM | AutoCAD | SmartPlant Instrumentation | Microsoft Office

"Meridian provides us with a single source of asset information and manages all our plant related engineering and maintenance processes."

– Yvan Daelemans, Engineering Manager

4TH
LARGEST OIL &
GAS COMPANY

\$171B
ANNUAL REVENUE

130
COUNTRIES

98,000
EMPLOYEES

THE COMPANY

As one of the largest oil & gas companies in the world, TotalEnergies' (formally known as TotalSA) businesses cover the entire oil & gas chain, including crude oil & natural gas exploration and production, transportation, and refining. In the company's refining & chemicals segment, TotalEnergies in Belgium produces base petrochemical products, such as ethylene, propylene and benzene. These monomers are used either in the Antwerp and Feluy plants for polymer production, or delivered to the chemical industry for the production of a variety of fine chemicals and consumer products.

THE CHALLENGE

TotalEnergies was looking for a solution to automate and streamline the change management process. The engineering creation, editing, approval, and release process was manual and paper-based, with limited capabilities to track the document changes.

- Engineering documents were stored in an unsupported document management system with limited workflow capabilities
- There was no direct relationship between plant assets and engineering information stored in the document management system
- Maintenance and Operations only had access to engineering documents as hard copies in the drawing office

THE SOLUTION

TotalEnergies selected Meridian based on its flexible information data model, ability to manage engineering change projects, out-of-the-box application integration, and scalable architecture. The company's legacy databases were migrated to a single source of asset information with over 300,000 documents and 150,000 objects. The documents in Meridian were then linked with the corresponding assets in SAP PM. The solution also provided out-of-the-box integrations with the company's CAD and Microsoft Office applications.

"We selected and implemented Meridian to manage all plant-related asset information and documentation."

"Meridian facilitates the change management process and keeps control over document changes in engineering projects."

THE RESULTS

Meridian is managed by a centralized location in Brussels, with fast and reliable connections for users at the plants in Antwerp and Feluy. Over 120 employees are now able to work according to established management of change procedures, and an additional 600 employees have read-only access in order to find and view asset-related engineering information.

- Optimized engineering change process
- Ability to ensure and maintain license to operate
- Improved quality and availability of asset and engineering information
- Easy and secure access for external parties and contractors
- Reduced document exchange costs by €3 million per year
